## PRESS RELEASE

FOR IMMEDIATE RELEASE  
 August 10, 2009

### ShipConstructor Increases Parts per level by 50%

In recognition of today's challenging economic times, the newly released version of ShipConstructor® Software (2008 R4.4) allows customers using the level licensing option to have 50% more parts per level.

"Our customers spoke and we listened," says Rolf Oetter, President of ShipConstructor Software Inc. "We decided to give clients more bang for their buck by increasing, for example, the maximum structural part count for level 4 licenses from 2000 to 3000 parts."

The increase is targeted at small & mid-size clients who will now be able to design and model larger vessels and work on larger projects with other designers and shipyards, thus opening up new revenue streams. For enterprise level clients, ShipConstructor still offers "unlimited" level options.

ShipConstructor Software Inc. President, Rolf Oetter (right) hears customer concerns

The parts per level increase is only available to clients who have paid for Upgrades, Maintenance and Support (UM&S) and who upgrade to ShipConstructor 2008 R4.4. Clients whose UM&S has expired may contact sales@ShipConstructor.com to renew and take advantage of this value enhancing opportunity.
